MTS-3205US

14		(d)	extracting the first program, the packet of the second program
15	and the NIT in response to step (a);		
16			
17		(e)	producing a selection information table (SIT) from the service
18	information;		
19			
20		(f)	replacing the NIT with the SIT using the PID stored in step
21	(c);		
22			
23		(g)	replacing the packet of the second program with the SIT using
24	the PID for th	e pack	tet of the second program stored in step (b); and
25			
26			recording the first program including the SIT produced in step
27	(e) and the SIT from step (g).		
1		9.	(Newly Added) In a communications system receiving a
, 2	9. (Newly Added) In a communications system receiving a multiplexed transport stream including a program, a dummy program, program		
3	specific information including a network information table (NIT), and service		
4	information, a	meth	od for recording the program comprising the steps of:
5			
6		(a)	identifying a respective packet identifier (PID) for the
7	program, the dummy program and the NIT;		
8			
9		(b)	storing the PID of the dummy program in a replacement store;
10			
11		(c)	storing the PID for the program and the PID for the NIT;
12			e e
13		(d)	extracting the program, the dummy program and the NIT in
14	response to step (a);		
15			
16		(e)	producing a selection information table (SIT) from the service
17	information;		
18			
19		(f)	replacing the NIT with the SIT using the PID stored in step
20	(c);
